

QR Code Poster

Websites have a bar code called a QR Code. People with smartphones can download a bar code scanner app to read the QR Codes. The app is free on some, if not all, smartphones. The smartphone will scan the code and show the link to the website, which can then be clicked on to open your website. Customers can scan your QR Code in your window any time, business open or closed, and be directed to your website.

I will print posters that have been approved by Ernie. This poster will have your website QR Code and website plus facebook icon if you want. If you participate in the Visual Merchandising Program, he will mount them and place them in your window.

If you would like to print your own poster with QR Code, I can tell you how to find your website's code. If you participate in the VMP, the poster needs to be approved by Ernie before being placed in your window.

_____ Yes, I would like a QR Code poster for my business.

Website URL _____

facebook logo _____ Yes _____ No
